

Aquatec Maxcon has delivered the membranes for the Eli Creek Water Reclamation Plant at Hervey Bay. This plant serves 21,000 persons and utilises Aquatec Maxcon's world leading Kubota membrane bioreactor technology to deliver microfiltered disinfected water directly from the bioreactor without further treatment. This high quality water is suitable for re-use and can reduce demand on domestic storages and supplies. The plant will be brought into service during 2008.
