

Aquatec Maxcon are pleased to announce that our Waste to Energy Facility was chosen as the winner of the Australian Infrastructure Project Innovation Award at the Australian Water Association's first ever virtual Ozwater Online Awards Event. This prizewinning Waste to Energy project is the result of almost a decade of work beginning as an Expression of Interest and progressing through to detailed design and construction and finally culminating in this level of recognition within our own industry. This is a very special time and a proud moment for the Aquatec Maxcon team.

Aquatec Maxcon would like to thank Yarra Valley Water for investing in our technology. We have enjoyed every step of the process.
